

## PRESS RELEASE

### **Deltro Energy Inc. awards contracts under IESO Energy Storage Procurement Phase 1**

Mississauga, ON, January 29, 2016– Deltro Energy Inc., one of the leading project development and electrical systems integrators in Canada awards contracts to Leclanché and Greensmith Energy under IESO Energy Storage Procurement Phase 1. Due to the increasing amount of renewable energy projects providing intermittent power to Ontario's high voltage transmission lines, there is a heightened need for grid ancillary services. Frequency regulation, voltage control and reactive power are the service needs to be met by this project.

Deltro Energy Inc. will procure, design and construct the site facilities balance of plant scope and high voltage connections to the grid. Leclanché was selected as exclusive partner to provide 53MW Energy Storage Systems.

David Del Mastro, CEO of the Deltro Group of Companies commented: "After an intense round of competitive bidding among many of the world's largest energy storage providers, we have decided to team up with Leclanché for this project because of their high quality battery storage products, very professional approach and ability to provide thoughtful solutions. We have asked Leclanché to deliver these storage systems on a turn-key basis and will work closely with them to ensure this project is successfully constructed and fully integrated into the IESO grid".

Greensmith Energy, one of the largest providers of energy storage software and integration services was selected for its GEMS software platform. "We selected Greensmith not only because they provided the most advanced software technology, but we were looking to partner with a trusted advisor to deploy energy storage in Canada and around the world," said Del Mastro. "Deltro's mission is to be the leader in bringing advanced renewable generation and energy storage to our growing base of customers and partners globally and this key partnership with Greensmith will enable us to do that"

**About Deltro Energy Inc.:** Deltro Energy Inc. designs and integrates energy storage with various technologies through strong industry partnerships that deliver innovative solutions for power utility grids, micro-grids, renewable integration and behind the meter applications. Providing turnkey solutions that are scalable, practical, deployable and commercially feasible makes Deltro Energy Inc. a leading electrical system integrator in Canada. Deltro Energy Inc. was successful negotiating the original contract in a fair bid process from Hecate Canada, the original contract winner.
